

Double Hinge
5'x5' and larger

Hinge-Top Floor Scale

EXTREME MEASURES:

- Corrosive Environments
- Heavy Washdown
- Strict Sanitation
- Intensive Use

Single Hinge
4'x4' and
smaller

Optional smooth deck

- *Stainless steel, hermetically-sealed Weigh Bars®*
- *Flow-through design*
- *Top access leveling*
- *Hinged top with safety catch and stainless steel struts – easily raised by one person*

The Weigh-Tronix Hinge-Top floor scale was designed for use in heavy washdown food and chemical applications.

Features and Benefits

Patented design and quality construction— At the heart of all Avery Weigh-Tronix floor scales is the patented Weigh Bar® weight sensor – synonymous with accuracy and durability in the scale industry. In a recent 30 month study of weight sensor failures, the Weigh Bar was proven to be 15 to 25 times more reliable than competitive load cells.

Comparative Weight Sensor Reliability

Hermetically-sealed stainless steel Weigh Bars—

Each Weigh Bar is hermetically sealed by welding a stainless steel sleeve over the strain gauges and wiring harness. This added layer of protection prevents any ingress of water, allowing thorough wash-down of the Weigh Bars. The scale ships standard with approximately 20' of load cell cable to interface with the remote junction box.

Tubular design frame— No formed channels or structural angles are used in the base frame construction. The tubular design eliminates hidden areas, where food and contaminants could hide, allowing total clean-up.

Stainless steel struts— The Hinge-Top features stainless steel struts to lift the top deck for wash down. A safety latch keeps the deck propped up while cleaning out the understructure. Note: 30" x 30" and 36" x 36" models are designed without struts.

Remote stainless steel junction box— The stainless steel junction box is designed to be wall mounted for extra protection during washdown. It includes 25' of cable to interface with the indicator.

Safety-tread deck plate— The scale deck is constructed from 304 stainless steel tread plate to provide a slip-resistant surface in wet environments. Smooth plate is also available.

Options

Drive-on ramps—

Connect up to 4 ramps for maximum accessibility.

Pit frames— For in pit operations, Avery Weigh-Tronix offers a wide range of bolt together or welded pit frames.

Internal Junction Box— The Junction Box is mounted within the frame for maximum protection and a clean exterior.

Smooth-top deck plate

Specifications

Construction: 3/16" top plate (on 2,000 lb. and 5,000 lb. models) with welded support channels. 10,000 lb. models have 1/4" top plate

Finish: 304 stainless steel with safety tread deck plate

Weight Sensors: Four IP 68 rated hermetically sealed stainless steel Weigh Bars. FM (pending) with Weigh-Tronix model WI-150 weight indicator

Load Cell Output: 2 mV/V

Overload Protection: 150%

End Loading: 100%

Accuracy: NTEP Pending at 5,000 divisions

Temperature: 14 to 104° F (-10 to 40° C)

Agencies: NTEP (Pending) Canadian Weights and Measures (Pending), FM (Pending)

Interface Cable: 25 ft. of cable from junction box to indicator included
